SAE J1926 uses UN/UNF threads and is often referred to as SAE Straight Thread. The female port is often referred to as ORB or O-ring boss. This port style, shown in Fig. G4, is widely used in North America. Fig. G4 — Typical O-Ring Boss Port BSPP In Europe, Japan and many other former Commonwealth

Pipe Fittings and Port Adapters - Parker Hannifin

Also known as ball-seat hose nipples, these fittings consist of a barbed shaft with a rounded end that sits inside a female threaded nut. When mated with a male threaded fitting, the rounded end presses tightly against the inside of the male threads for a better seal than a single-piece fitting. Once assembled, insert the barbed end into hose and secure with a clamp or a crimp-on hose ferrule.

SAE Tube Fittings | McMaster-Carr

Important differences between SAE J1926-2 and SAE J1926-3 . There is a visible difference between the stud length of SAE J1926-2 and SAE J1926-3, as seen in Figure 1. This is why it is important to design your port depth based on SAE J1926-1 rather than designing it from the stud length of the fitting.

SAE J1926 Ports: Critical Fluid System Design Considerations

Port Dimensions. SAE style Zero-Leak Gold Plugs are interchangeable with plugs used in SAE J1926 standard ports and the metric style are interchangeable with metric plugs used in ISO 6149 standard ports. Port drawings are provided below. A major advantage to the Zero-Leak Gold Plugs is NO SPECIAL PORT TOOLING REQUIRED...they are designed to be within the standard port configuration.

seal, such as SAE straight thread port (SAE J1926/ISO11926), SAE four bolt split flange (SAE J518/ISO 6162), and ISO 6149 is recommended. For applications where elastomeric seals can't be used, consult the manufacturer. As noted, BSPT and metric taper are designed and perform similarly. Follow the NPT/NPTF guidelines for their application.
