Step 3 of the suggested method would not apply to this problem since there are no forces directed "at angles" (that is, all the forces are either horizontally or vertically directed). Step 4 of the suggested method involves the determination of any known forces. In this case, the force of gravity can be determined from the equation $F_{\text{grav}} = m \cdot g$. Using a g value of 9.8 m/s^2 , the force of ...

You are on an amusement park ride with your back against the wall of a spinning vertical cylinder. The floor falls away and you are held up by static friction. Assume your mass is 73 kg. (a) Draw a free-body diagram of yourself. (Do this on paper. Your instructor may ask you to turn in this work.) (b) Use this diagram with Newton's laws to determine the force of friction on you.
