(PDF) Personal Construct Psychology, constructivism, and ...

The Personal Construct Psychology model focusses on human uniqueness approaching change through the exploration of personal meaning with an emphasis on understanding how each of us holds together our meaningfulness and positive outlook in the social and cultural contexts of our everyday lives.

Personal Construct Psychology Association

Personal construct theory suggests that people develop personal constructs about how the world works. People then use these constructs to make sense of their observations and experiences. The world we live in is the same for all of us, but the way we experience it is different for each individual. For example, imagine that you and your friend are going for a walk in the park and you spot a large brown dog.

Overview of Personal Construct Theory

Personal Construct Psychology (PCP) is a theory of personality developed by the American psychologist George Kelly in the 1950s.

Personal construct psychology | Psychology Wiki | Fandom

Personal Construct Psychology is a "new" (in fact more than sixty years old!) approach to psychology which tentatively has been characterised as "person-centred", "cognitive" or "humanistic". That means that the focus is on the "personal" ways that individuals use to "construe" (understand, interpret, and even actively design) their world.
