Piled Raft Foundation International Journal

A piled raft foundation is economical as compared to the pile foundation because piles in the case do not have to penetrate to the full depth of clay layer but it can be terminated at higher elevation. Piled raft foundations have been used successfully in Germany and other place where thick clay deposits exist over large depth. II.LITERATURE REVIEW

PILED- RAFT FOUNDATION FOR HIGH RISE INDUSTRIAL STRUCTURE

A piled raft foundation comprises both piles and a pile cap that itself transmits load directly to the ground. The aim of such a foundation is to reduce the number of piles compared with a

more conventional piled foundation where the bearing effect of the pile cap, or raft, is ignored. This paper describes a 'hybrid' approach for the analysis of piled raft foundations, based on a load transfer treatment of individual piles, together with elastic interaction between different piles and ...

An approximate analysis procedure for piled raft foundations

A three-dimensional finite-element model of a piled raft foundation was developed to simulate the case of a piled raft foundation. The model accounts for pile-to-pile, raft-to-pile, pile-to-soil, and raft-to-soil interactions. ... International Journal of Geomechanics. Vol. 17, Issue 2 (February 2017)

Pile raft foundation behavior is evaluated with many researches and the effect of pile length; pile distance, pile arrangement and cap thickness are determined under vertical or horizontal static and dynamic loading. In the present paper the influence of pile length configurations on behavior of multi-storied are evaluated under vertical loading.

A simplified solution for piled-raft foundation analysis ...

The combined pile-raft foundation (CPRF) has been widely recognized as economic and rational foundation for high-rise buildings when subjected to vertical loading because of its effectiveness in load sharing by both raft and pile components. This results in smaller total and differential settlements with a reduced number of piles as compared with group piles.

Piled raft foundation is a new concept in which the total load coming from the superstructure is partly shared by the raft through contact with soil and the remaining load is shared by piles through skin friction. A piled raft foundation is economical compared to the pile foundation.

BEHAVIOURAL STUDY OF PILED RAFT FOUNDATION IN LAYERED SOIL ...

Combine Piled Raft Foundation(CPRF) is an emerging type of new foundation techniques in High rise buildings and skyscraper which raft as a shallow foundation and pile as deep foundation works sharing the total load and reduce settlement and bending moment. the modern approach of design philosophy is included in post graduation level with soil structure interaction of CPRF and this will use to understand the basic concept regarding it.
