Hot melted rock from the middle of our planet is forced into a jagged journey through cracks in the earth's crust until it explodes, violently and unexpectedly, in a volcanic eruption that can la **NOW IN SPANISH!**

Volcanoes! by Anne Schreiber - Goodreads

6. Volcanoes are classified as active, dormant or extinct. This refers to the amount of volcanic activity. "Active" means there's regular activity, "dormant" means there's been recent activity but the volcano is currently quiet, and "extinct" means it's been so long since the last eruption that it's unlikely to ever erupt again. 7.

National Geographic Kids Readers: Volcanoes by Anne Schreiber

A volcano is an opening in Earth's crust that allows molten rock from beneath the crust to reach the surface. This molten rock is called magma when it is beneath the surface and lava when it erupts or flows from a volcano. Along with lava, volcanoes also release gases, ash, and rock. It's a super hot mix that can be both incredibly destructive and creative.
